

Assessor Toolkit: Students

Cognitive support for students with ADHD,
dyslexia, brain injury and cognitive fatigue

What's in this toolkit

Everything you need to assess for, justify and recommend Recallify in a study needs assessment

1

Who it supports

Conditions and the cognitive barriers Recallify targets

2

How it works

Capture, summarise, remember, act

3

Key features

One page per feature, with student examples

4

Full feature list

Every function included in the licence

5

What users say

Reviews from the App Store and Google Play

Who Recallify supports

Different diagnoses, shared symptoms. Built by clinical neuropsychologists around five areas students struggle with.

ADHD

Dyslexia

Acquired brain injury

Long Covid

Memory difficulties

Cognitive fatigue

Memory

Recall and retention
of lecture and reading
content

Organisation

Structuring notes and
prioritising work

Planning

Executive function:
deadlines and next
steps

Attention

Following teaching
and following through

Learning

Consolidating
material ahead of
assessments

How it works

Capture it once, keep it: one place for everything a student needs to remember

01

Capture

Record a lecture, seminar or placement conversation, type a note, or upload slides, documents or a photo. Transcribed as it happens.

02

Summarise

Long recordings and files become short summaries with key points and next steps, so there is less to hold in mind.

03

Remember

One searchable timeline to ask questions of. Quizzes built on active recall and spaced repetition help learning stick.

04

Act

Tasks and deadlines are pulled out, prioritised and sent to the calendar with reminders.

Key features

What a student uses day to day, in lectures and in independent study

Record and transcribe

Lectures, seminars and placements, up to 3 hours per recording

[See page 6](#)

Structured summaries

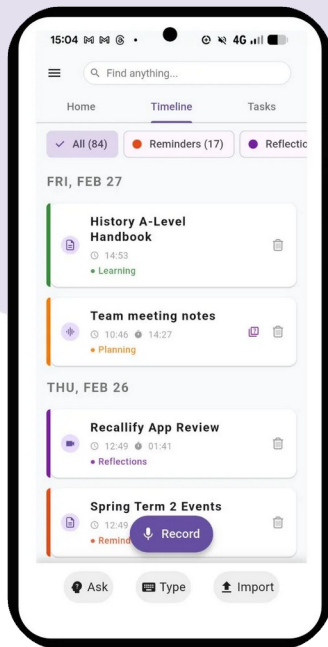

Key points and next steps from recordings and files

[See page 7](#)

Import anything

Slides, documents up to 120 pages, photos and video

[See page 8](#)

Quizzes

Active recall and spaced repetition to consolidate learning

[See page 9](#)

Search and ask

Ask questions of everything captured on one timeline

[See page 10](#)

Tasks and reminders

Deadlines extracted and sent to the calendar

[See page 11](#)

Record every lecture, seminar and placement

- ✓ **Record** lectures, seminars, tutorials and placement conversations, up to three hours per recording
- ✓ **Transcribed as it happens**, so the student can listen and take part instead of writing
- ✓ **No monthly limit** on the number of recordings with an AT licence

Helps with:

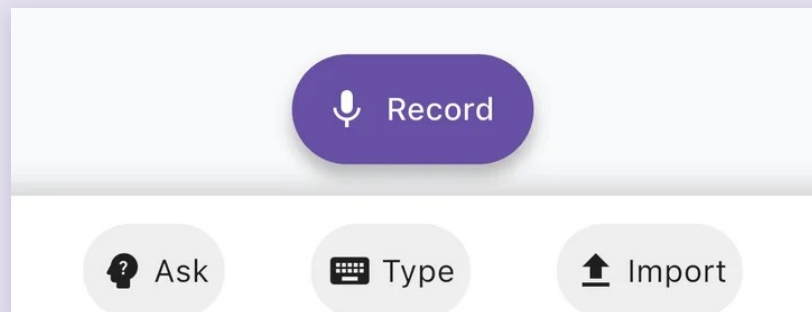

Attention

Memory

Example scenario

Sam, a first-year history student with dyslexia and slow processing speed, used to fall behind trying to write and listen at once. Now Sam records each seminar, joins the discussion, and checks the transcript afterwards for the names and dates missed.

Record, Ask, Type and Import sit at the bottom of every screen, one tap away

Turn long recordings into clear summaries

- ✓ **Structured summaries** of long recordings and files
- ✓ **Key points and next steps** drawn out automatically
- ✓ **Less to hold in mind** and less to re-listen to or re-read

Helps with:

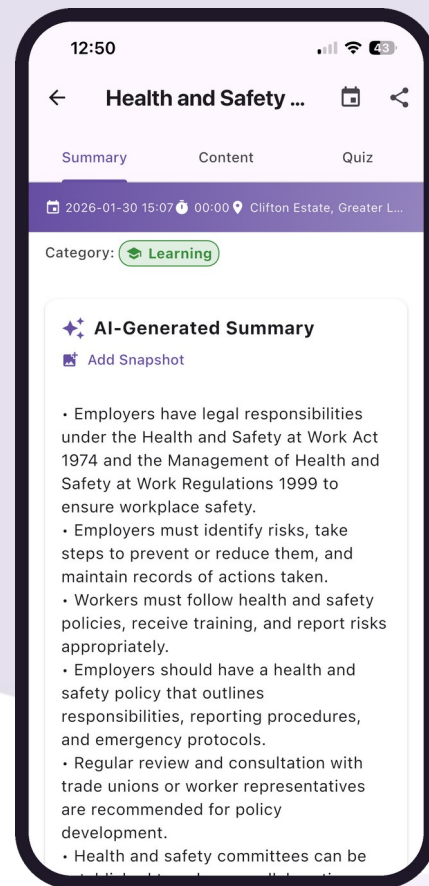

Memory

Organisation

Example scenario

Aisha, a final-year student with ADHD, has a lecture on health and safety at work. The same evening she reads a one-page summary, instead of re-listening to the whole recording.

Import slides, readings and video

- ✓ Upload slides, documents and photos, up to 120 pages per text file
- ✓ Import video files up to 120 minutes each
- ✓ Summarised and stored on the same timeline as recordings

Helps with:

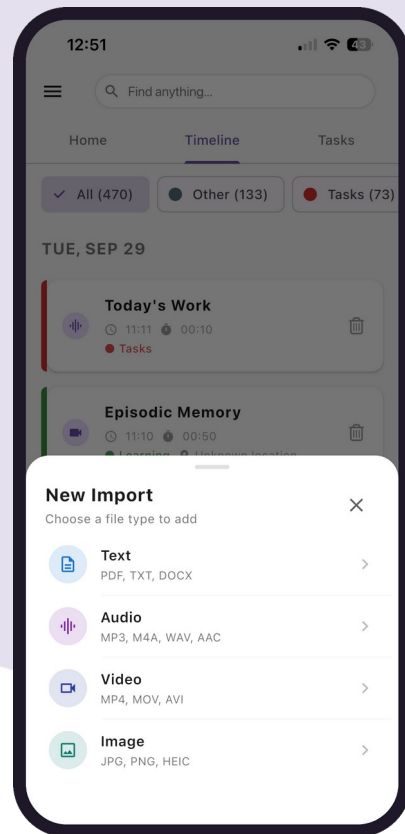

Learning

Organisation

Example scenario

Tom, a postgraduate student recovering from a brain injury, uploads a 40-page journal article and the week's slides. He reads the summaries first and goes back only to the sections he needs, which keeps reading fatigue down.

Make learning stick with quizzes

- ✓ **Quizzes generated** from the student's own lectures and reading
- ✓ **Built on active recall** and spaced repetition
- ✓ **Recognition-based questions** that support learning without overload

Helps with:

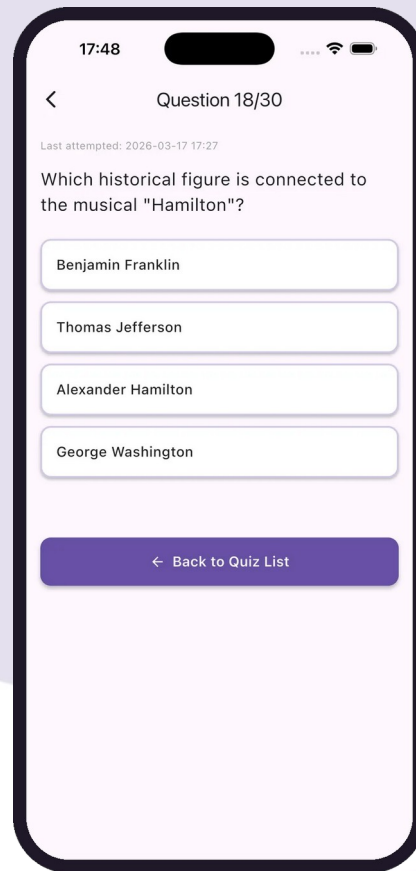

Learning

Memory

Example scenario

Marcus, a first-year history student with ADHD, finds it hard to revise by re-reading notes. After each lecture, he does a short quiz in Recallify on key people and events and repeats the questions he got wrong later in the week.

Find anything with search and ask

- ✔ **One timeline** of everything the student has captured
- ✔ **Search, or ask questions** in plain language about their own material
- ✔ **Find information** without re-listening to whole recordings

Helps with:

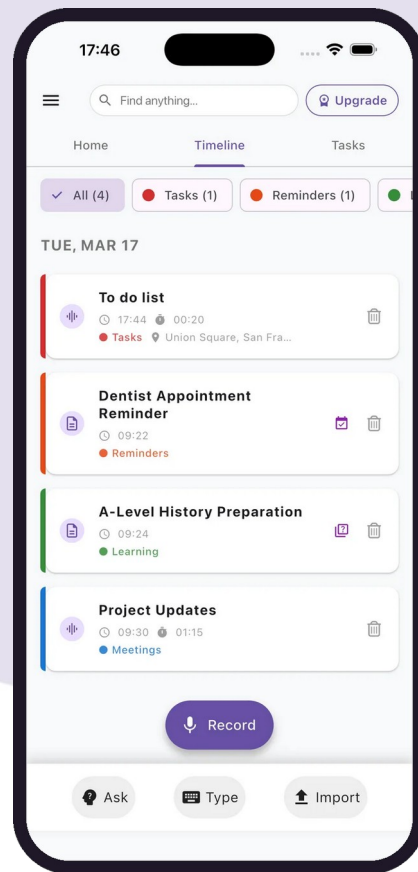

Memory

Organisation

Example scenario

Jordan, an engineering student with long Covid, can't remember which lecture covered a formula needed for an assignment. Jordan asks Recallify and goes straight to the right recording instead of searching a term's worth of notes.

Turn deadlines into tasks and reminders

- ✓ **Tasks, deadlines and appointments** pulled out of what was captured
- ✓ **Priorities and due dates** set for each task
- ✓ **Sent to the calendar** with reminders

Helps with:

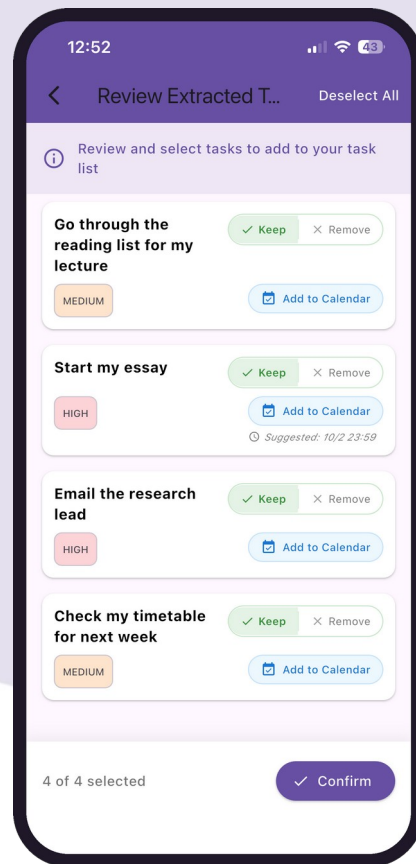

Planning

Organisation

Example scenario

Ellie, a psychology student with memory difficulties, records a meeting with her personal tutor. The prompts to check her reading list, start her essay, email a research lead and check her timetable appear as tasks, with reminders in her calendar.

Full feature list

Every function is included in every Recallify AT licence

Capture

- Record lectures, seminars and placements
- Live transcription as it happens
- Typed notes
- Import slides, photos and documents
- Import video (up to 120 mins per file)

Summarise

- Structured summaries of recordings and files
- Key points and next steps pulled out
- Reduced reading and listening load

Remember

- One timeline of everything captured
- Search and ask: question your own material
- Recognition quizzes using active recall
- Spaced repetition to support retention

Act

- Automatic task and deadline extraction
- Priorities and due dates
- Calendar integration
- Reminders

Access

- Web app, iPhone and Android
- One account, synced across devices
- No monthly usage limits (fair use)
- Email and video support

Data and security

- Encrypted in transit and at rest
- UK GDPR; ICO registered (ZB860514)
- Cyber Essentials certified
- Student owns their data

What students say

I use it to record whenever my lecturer is teaching the class something and it generates me questions and a useful summary. I have an ABI and I would recommend it.

So helpful for those with ADHD and other memory issues. Reminders, the ability to record thoughts and information, and quizzes to help you process details.

This has helped me no end with recording meetings, conversations, generating action plans and keeping track of my daily tasks. A huge benefit in reducing the cognitive load.
